

# 1. Slamdunk - Selenium Testing on Web application

In this challenge your task is to write functional testing for the Web Application application provided.

The application is a Static Web Application for a Fresco Travels Usecase.

There are 3 testing scenarios required.

1. To test Login Functionality.
2. To test Registration Functionality.
3. To test drag and drop functionality in about page.

All the Testing scenarios details are provided in the feature files in the **src\test\resources** directory in project folder.

Write your testing code according to the feature file.

## IMPORTANT:

- Run -> Install : to download the chrome driver and start the web application at port 8000.
- Run -> Preview: To preview the running application
- Run -> Test: To test the Selenium Script that you wrote.
- Explore the web application and its respective element **id** by inspecting the elements in the preview mode.
- Explore the feature file for the flow of testing the functionalities.
- To install the required dependencies run **mvn clean install** in the terminal.

## Git Instructions

Use the following commands to work with this project

Run

```
echo "Test your code with test option"
```

Test

```
mvn clean test -Dtest=CucumberRunner
```

Install

```
sudo bash install.sh|
```
